ML Engineer @
Avature

AI4Labour is the acronym for the Horizon 2020 European Project Marie Skłodowska-Curie Research and Innovation Staff Exchange Evaluations 'Reshaping labour force participation with Artificial Intelligence' aiming to predict which kind of new occupations will appear in near future and which kind of skills will be needed for these new occupations.

An innovative skill-based modelling and skill development methodology armed with AI techniques will be designed for the labour force.

The new methodology will be the building block of a web portal, serving as a recommendation tool for individuals, companies, institutions and policymakers.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie grant agreement No 101007961.
